

More QUESTIONS

Dr. Brad Ebert won't ever answer

Since the proposed new one story middle school roof is 2x the area of the existing 3 story middle school's roof, how much more will routine roof replacements cost us? How much more headaches and upkeep costs for 2x larger?

If we use \$10/sf as a middle grade rubber roof tear off and replacement price, the proposed school will routinely requires \$1.18 Million to completely replace the roof, which is more than half a million more than what we spend now.

So is it true the KASD school board is proposing a \$67,000,000 new school that will increase routine roof maintenance costs by around \$630,000 even though they already have a huge problem coming up with funds to maintain our existing schools?

Dr. Ebert, wouldn't the proposed new school roof make our \$51,000,000 dollar maintenance liability much worse?

Aren't we already desperate to minimize maintenance costs?

Did anyone on the school board think this through before they voted unanimously 7-0 to put a new BIGGER school on the ballot?
